FIG. 3

The graph illustrates the relationship between the concentration of ingredients and the thickness of the coating over time. The y-axis represents the 'Concentration of Ingredients' and the x-axis represents 'Application Time'. A horizontal line indicates a constant concentration level. The curve starts at a low concentration, remains constant for a short period, then rises linearly, crossing the horizontal line, and finally levels off at a higher concentration. The rising part is labeled 'C' and the plateau part is labeled 'D'. The x-axis is marked with 'start of application' and 'end of application'.
